## PREFACE

Tilapia have the rare distinction of being the subject of most research, publications and debate than perhaps any other tropical farmed fish (Pullin et al. 1994, Dey and Eknath 1997). In as early as 1992, there were already over 2,400 research publications related to tilapia that were analyzed (Pullin and Maclean, 1992). In addition to the information compiled from various field and laboratory sources, there have been a number of international symposia that have been held on tilapias in aquaculture.

In view of the tremendous research done on tilapia over the years, the ICLARM library has been acquiring much documentation on the subject. It ranges from published/-unpublished documents, theses, journal articles, reports and conference papers. This bibliography, however, is not an exhaustive listing of all documents on tilapia available in the library but rather it is a selective listing of documents on the subject. The compilation of this bibliography was intended as an ICLARM contribution to the International Technical and Trade Conference on Tilapia in Kuala Lumpur, Malaysia, 28-30 May 2001.

All documents listed in this bibliography are available in the ICLARM library. Entries are arranged alphabetically. Author, subject, taxonomy and geographic indexes are provided to facilitate cross-referencing. The reference materials used in compiling this bibliography are Aquatic Sciences and Fisheries Thesaurus: descriptors used in FAO's Aquatic Sciences and Fisheries Information System; and AGROVOC: a multilingual thesaurus of agricultural terminology.

Photocopies of documents listed in this bibliography are available at US\$0.15 per page including postage. Prepayment is preferred. Those interested should send their requests together with payment to ICLARM library. All cheques should be made payable to ICLARM. Copies of the database are also available on request. Price is US\$10.00 for an airmailed diskette. When requesting for photocopies of documents, please quote the location code of document (when provided).
