1. Naon paedahna melak lauk ?

Nu loba dahar lauk cai pasti sehat jeung kuat, oge moal geringan.

Barudak tereh galedé jeung serehat. Ulah sangka, budak nu cacingan lain kulantaran dibere lauk cai, eta mah akibat cai atawa kadaharan anu teu beresih.

Di pasar mana baé oge lauk cai, saperti lauk emas, mujaer, taraban dst, bisa dibeuli kalawan murah jeung gampang.

Kulawarga nu biasa dahar jeung lauk cai pasti sehat jeung gumbira. Usum hahajatan digedekeun silih asaan masakan lauk cai.

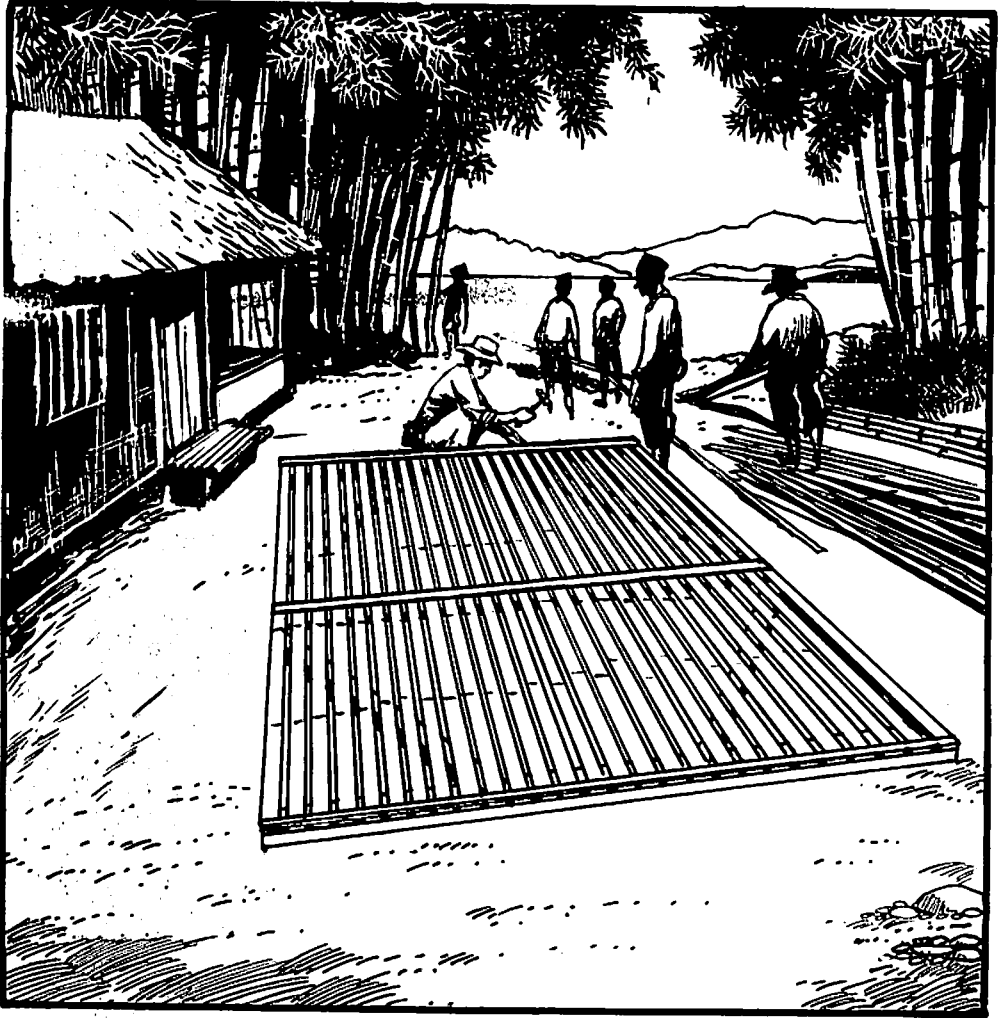

## II. Melak lauk Sistim Karamba

Kauntunganana :

- |   |                   |
|---|-------------------|
| 1. Babari dijieunna                             | 5. Babari marabna |
| 2. Waragadna murah                              | 6. Babari ngalana |
| 3. Bisa diurus rereongan ku tiluan atawa opatan | 7. Tereh gede.    |
| 4. Babari melakna                               |                   |

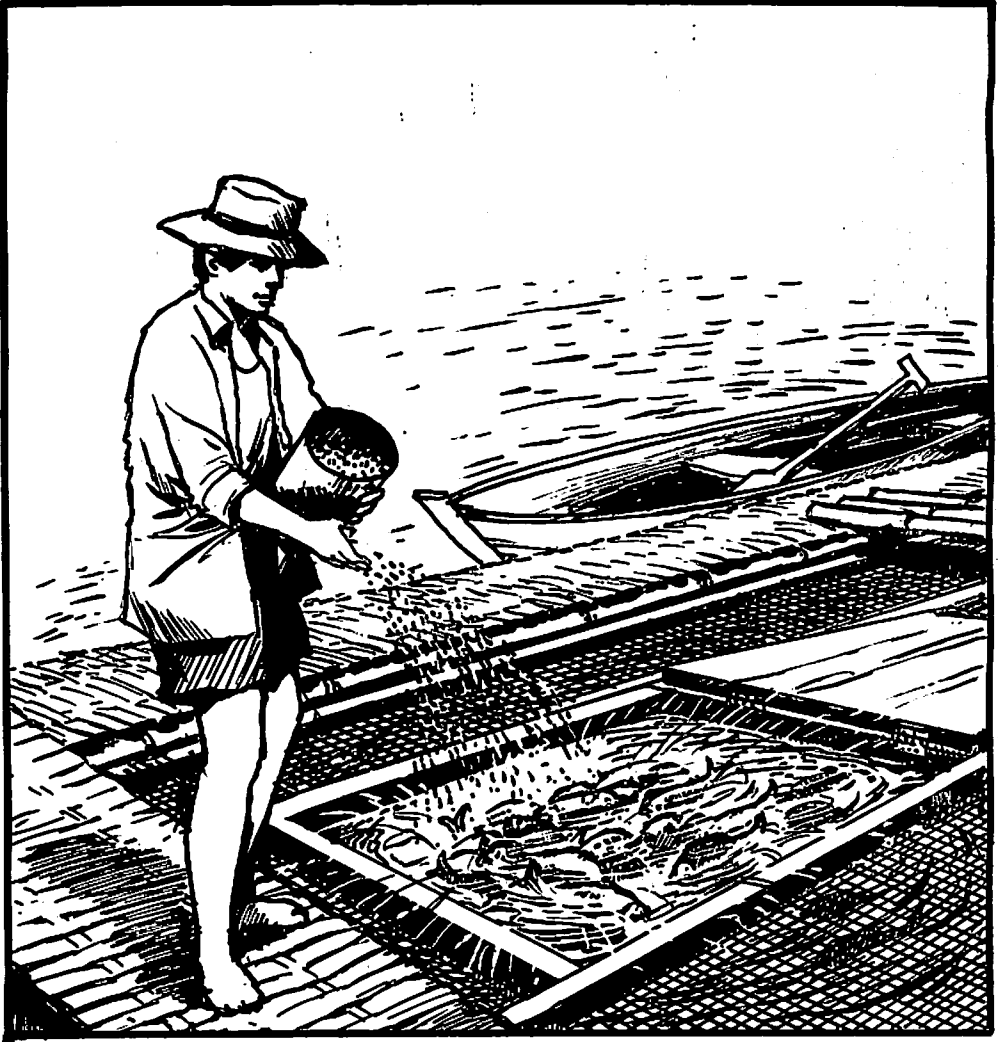

**Awi mangrupikeun bahan pokok pikeun nyieun karamba, nyieun karamba ku awi gampang pisan carana.**

Karamba nu dijieun sacara rereongan nu geus anggeus rek mimiti diasup-  
keun ka cai dibendungan.

Karamba ukuran  $4 \times 2,5 \times 1,75 \text{ M}^3$  dipelakan binih lauk ukuran dua/  
tilu ramo (50 gram), lobana kira-kira 700 siki atawa 35 kg.

**Parab lauk emas mangrupa pelet, diawurkeun kalawan make aturan anu geus ditangtukeun.**

Dina jero 90 atawa 120 poe lauk emas nu dipelak dina karamba geus  
meujeuhna diala.

anu geus diangkutkeun.

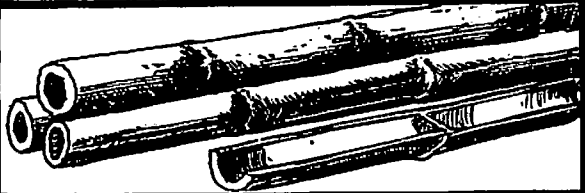

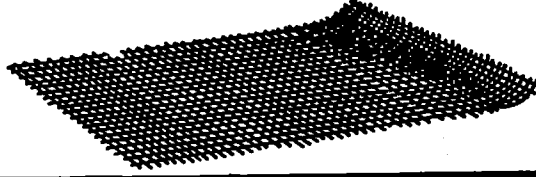

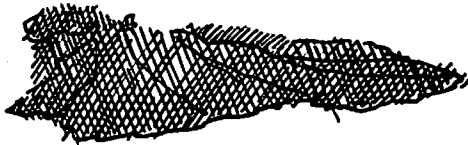

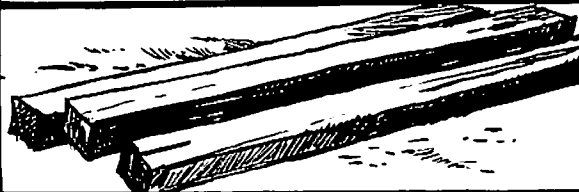

Sabagian gede lauk rek dijual ka pasar, sabagian deui rek dibagikeun ka anggota kelompok nu miara pikeun dahareun.

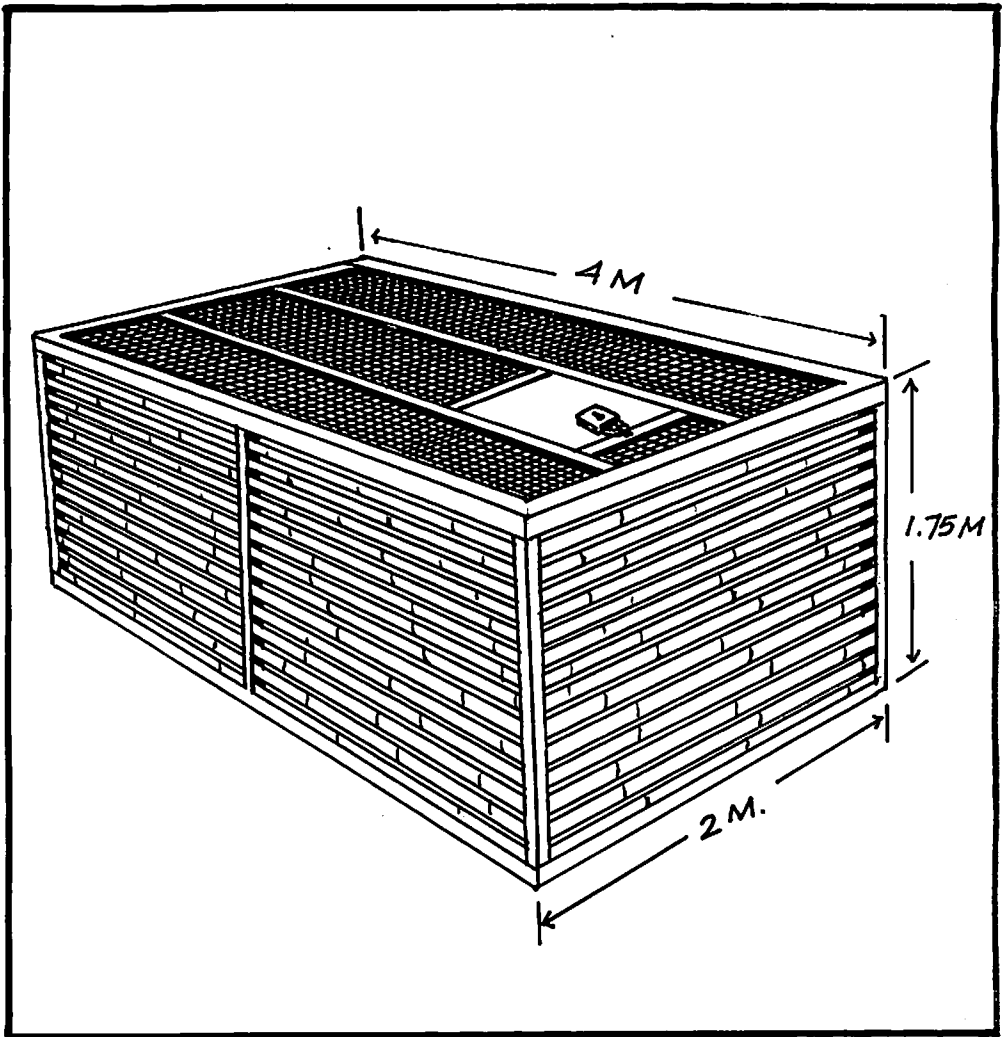

Duit hasil ngajual lauk, sawareh dipake meuli deui binih lauk, sawarehna deui dibagikeun kaanggota kelompok pikeun kaperluan masing-masing.

	AWI GOMBONG
	ERAM KAWAT
	JARING
	TALI PLASTIK
	PAKU
	KAI

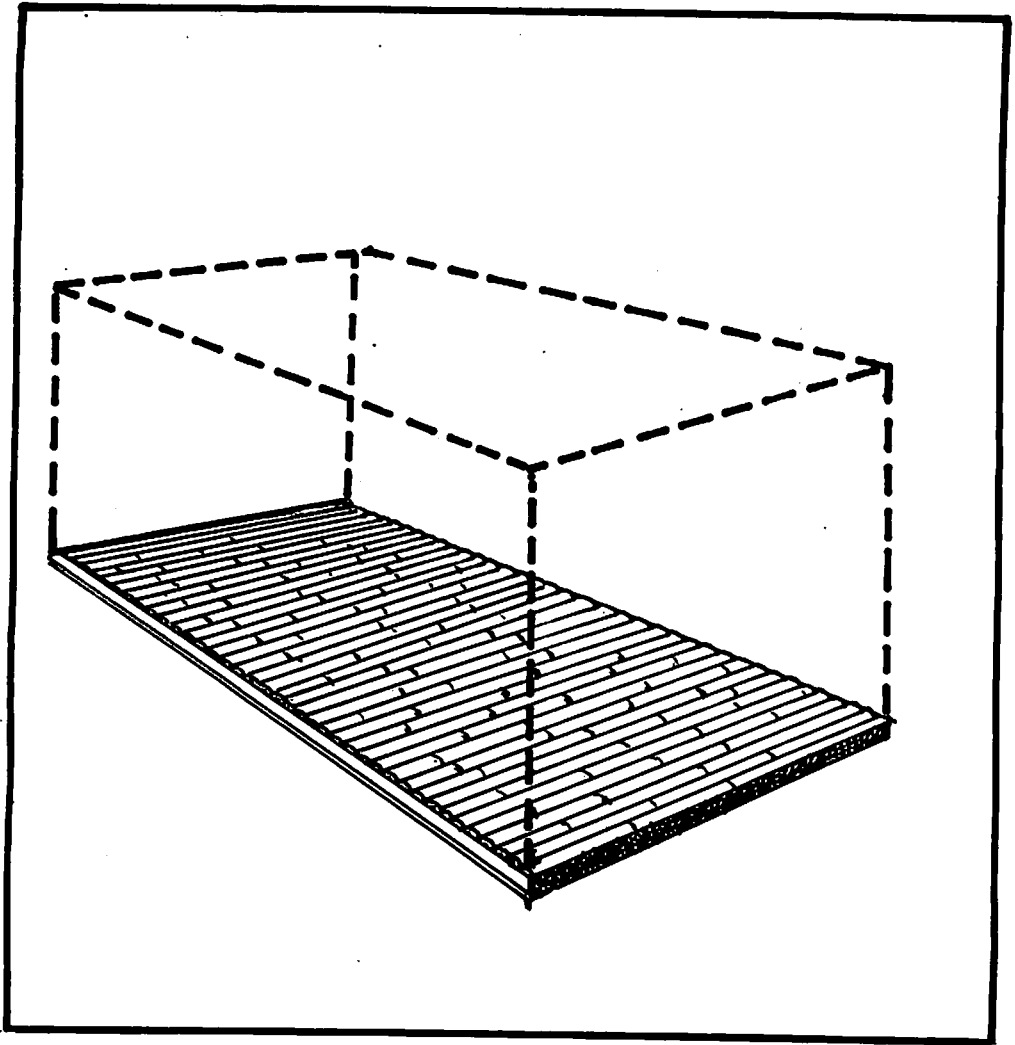

III. Bahanna : Sabagian bahan bisa dibeuli ditempat urang jeung sabagian deui bisa dibeuli dikota.

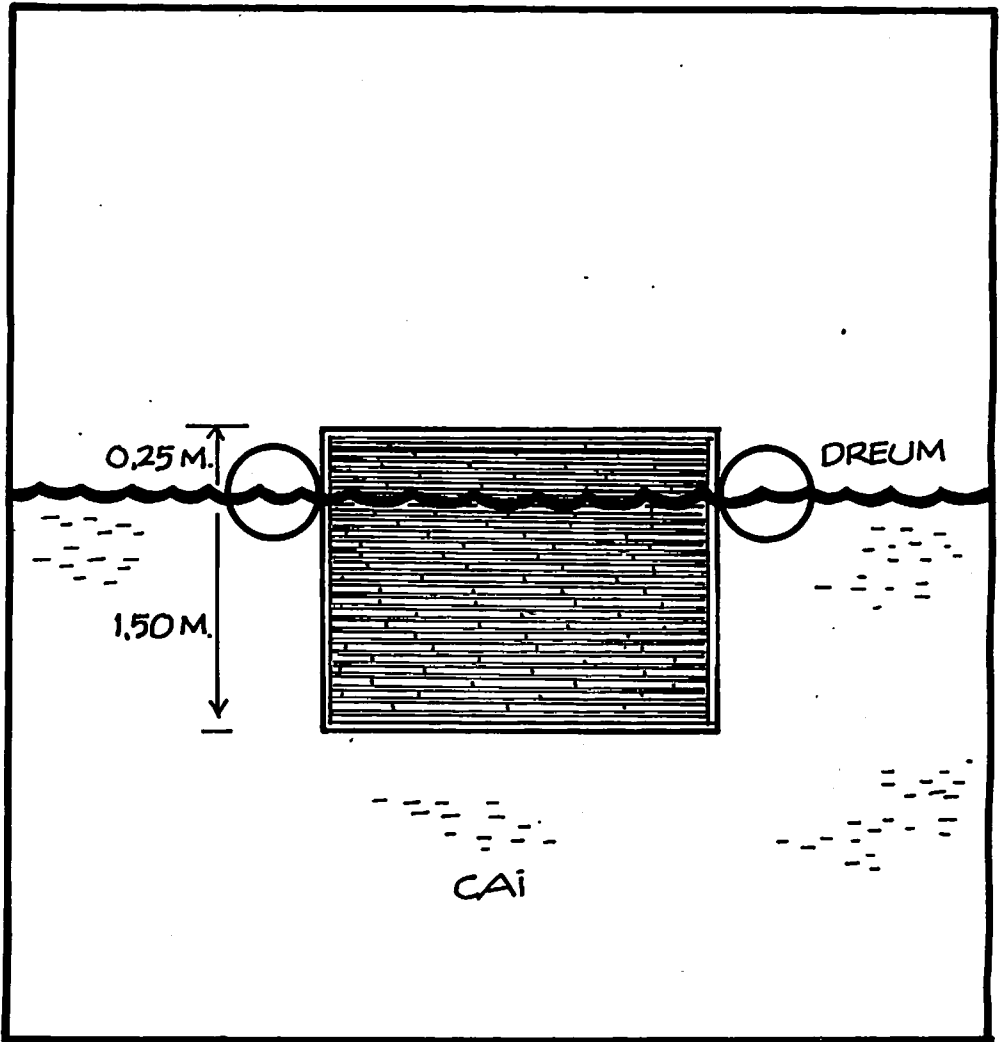

Awi dibeulah 4 atawa 6 pikeun tutup lolongkrang karamba. Gedena lolongkrang kira-kira teu bisa diponcoran binih lauk tea.

Lawang karamba make panto nu bisa dikonci pikeun ngajaga kamanan.

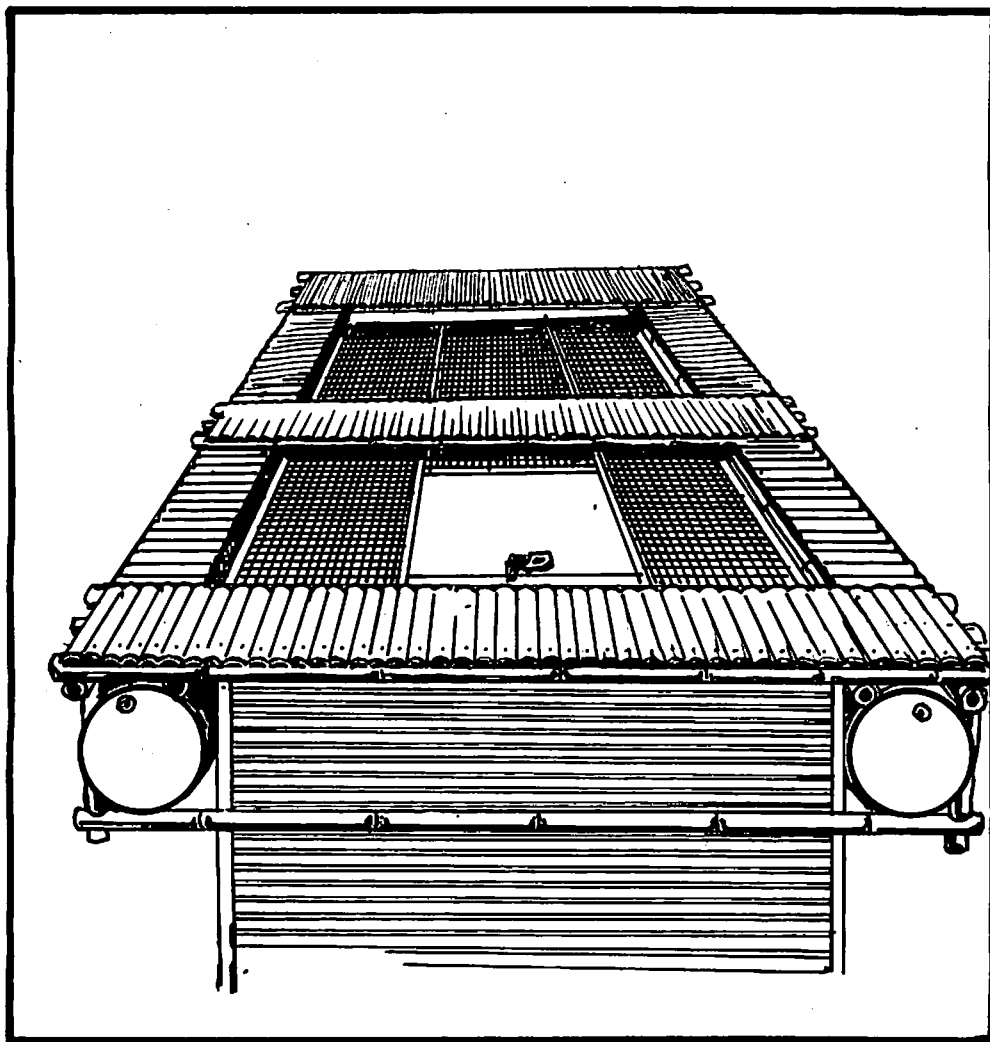

Dadasar karamba kaayaanana kudu leuwih kerep, sabab bisi parab nu teu kasantok lauk moncor kapiceun ka handap.

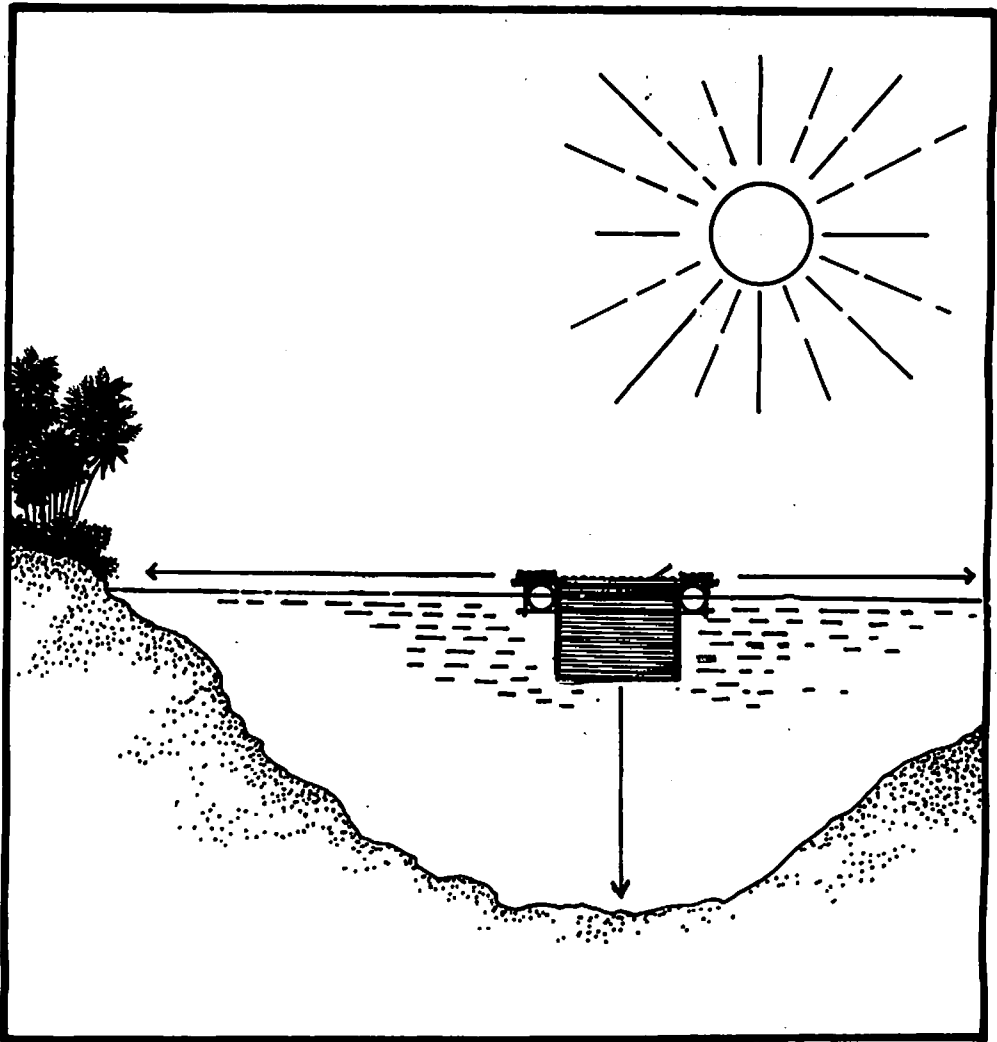

Ukuran jerona karamba tina beungeut cai.

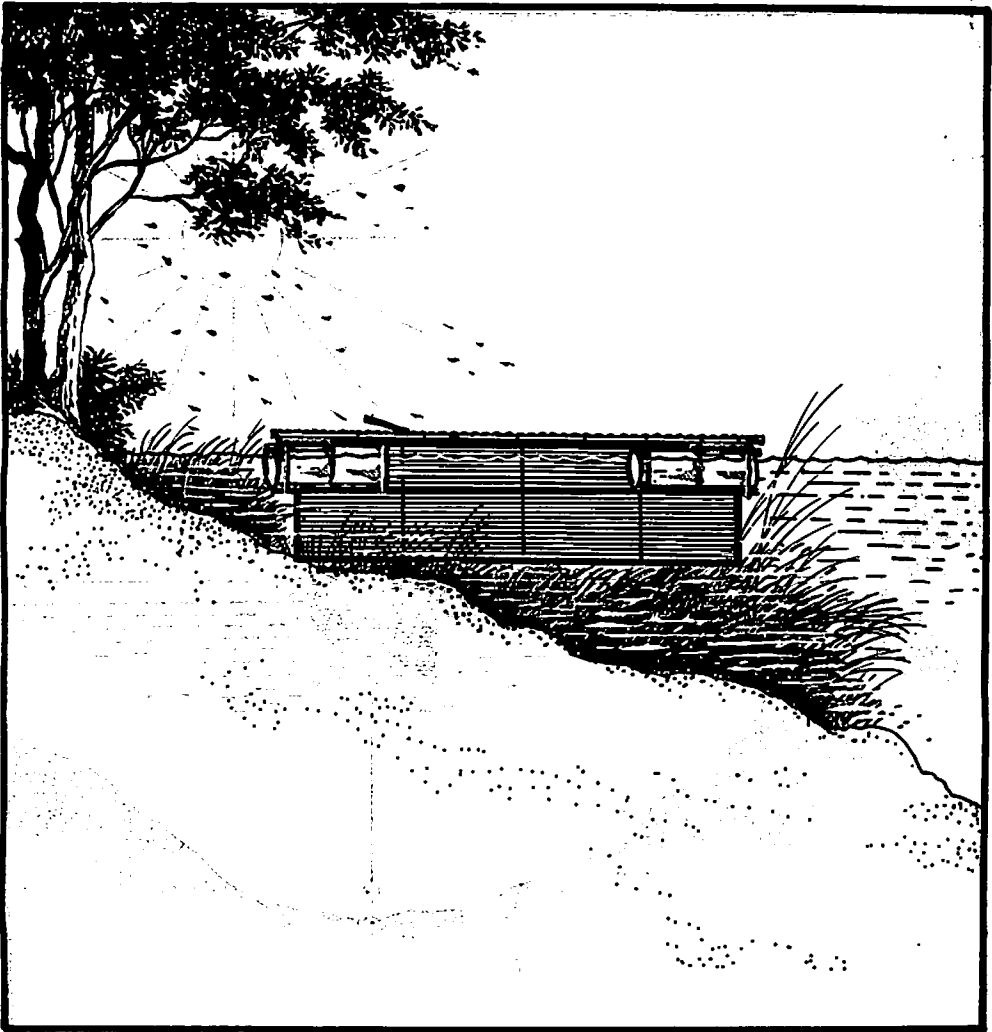

Pikeun ngembangkeun karamba, jaba tikudu make dreum, oge bisa ku rakit awi guluntungan.

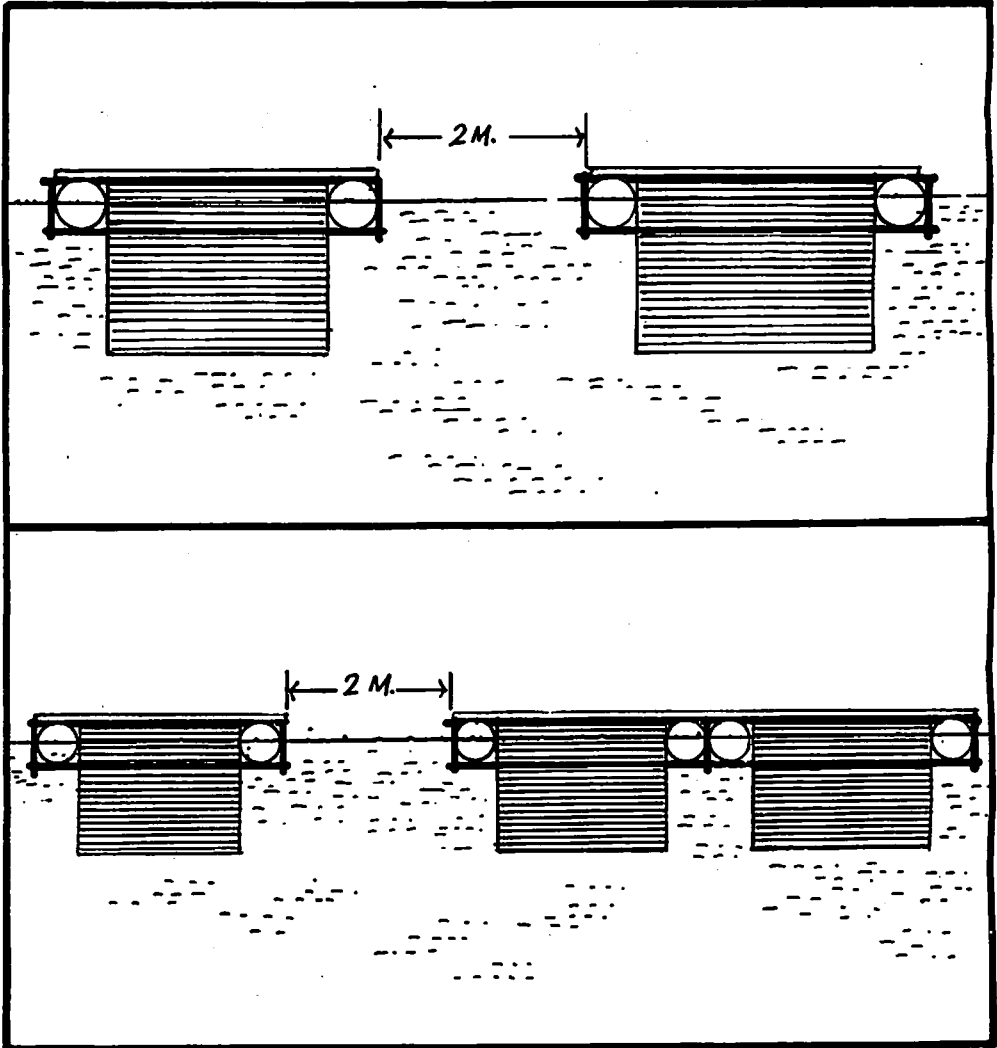

**IV. Tempat Merenahkeun Karamba nu hade nyaeta kudu :**

- 1. Ditempat negrak**
- 2. Ditempat deukeut ka imah**
- 3. Ditempat nu jero**
- 4. Ditempat nu bakal kasorong ku ombak cai bersih nu katiup angin.**

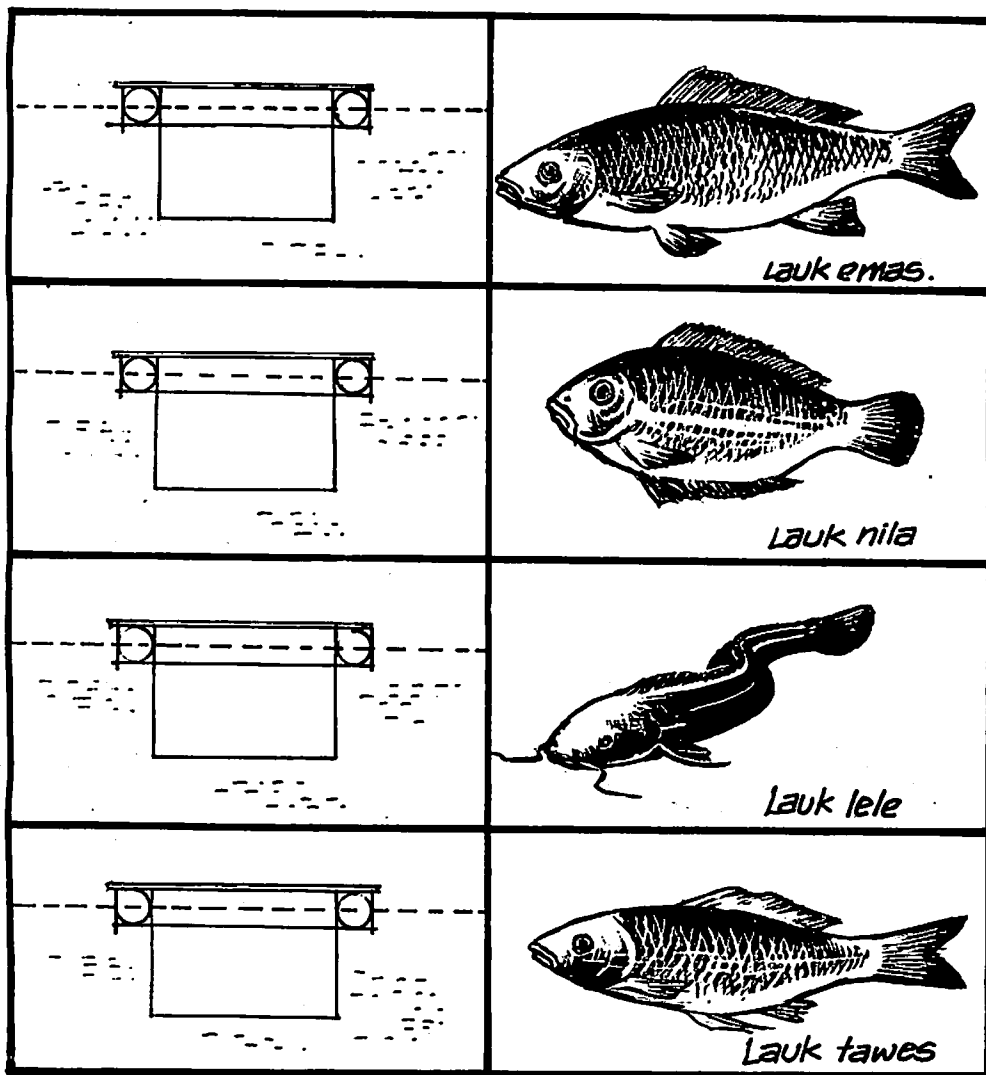

**Kudu dicegah ulah :**

1. Nempatkeun karamba dinu deet.
2. Loba runtah/kokotor deukeut karamba.
3. Teu ka tebak angin.
4. Ulah nempatkeun karamba kurang ti 5 unit sagundukna.
5. Lauk nu ditempatkeun ditempat kasebut diluhur bakal garering sarta bisa terus paraeh.

Nempatkeun karamba kudu :

1. Anggangna 2 meter
2. Di antara lolongkrangna bisa diliwatan parahu.
3. Di antara lolongkrangna (ombak) arus cai nu katebak angin kudu bisa liwat.

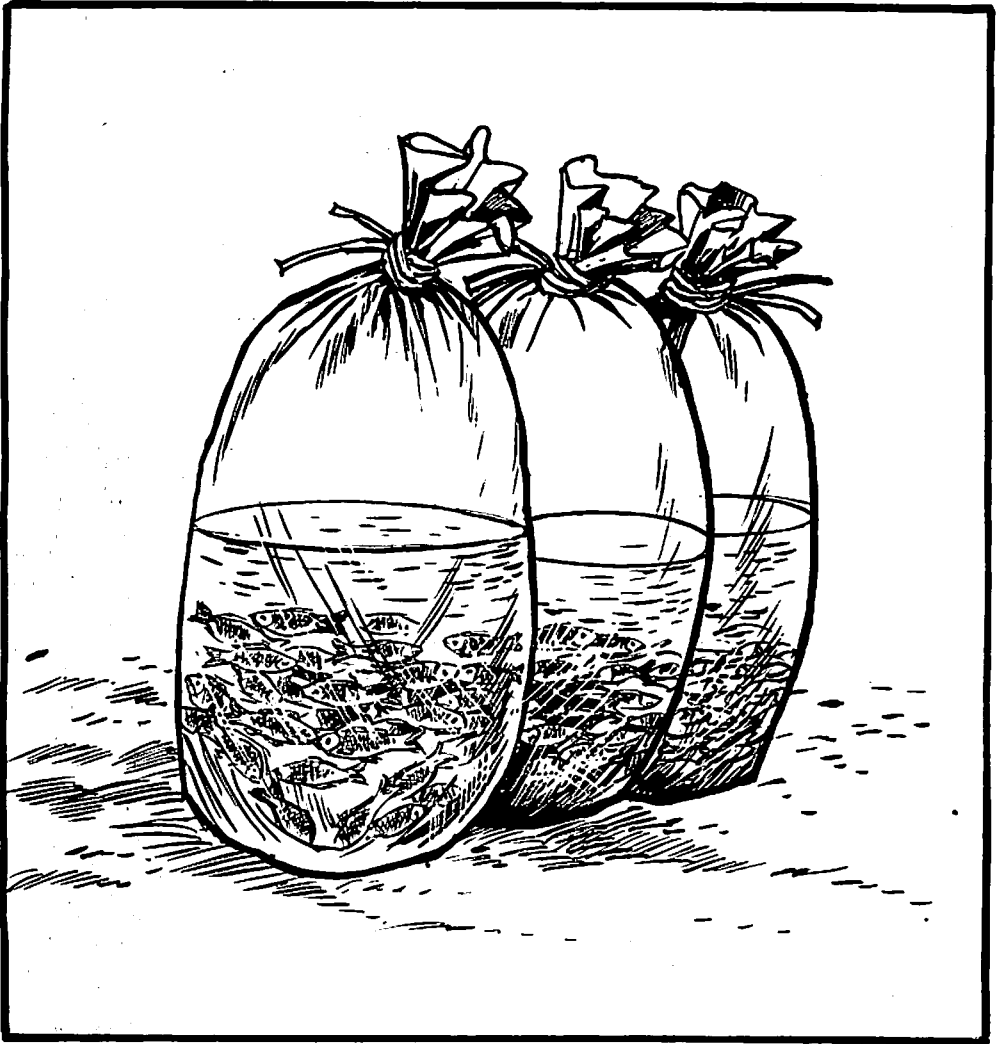

Rupa-rupa lauk nu bisa dipiara dina karamba.

V. Cara mawa jeung melak lauk Emas dina karamba.  
Umumna binih lauk emas laku pisan didaerah urang.

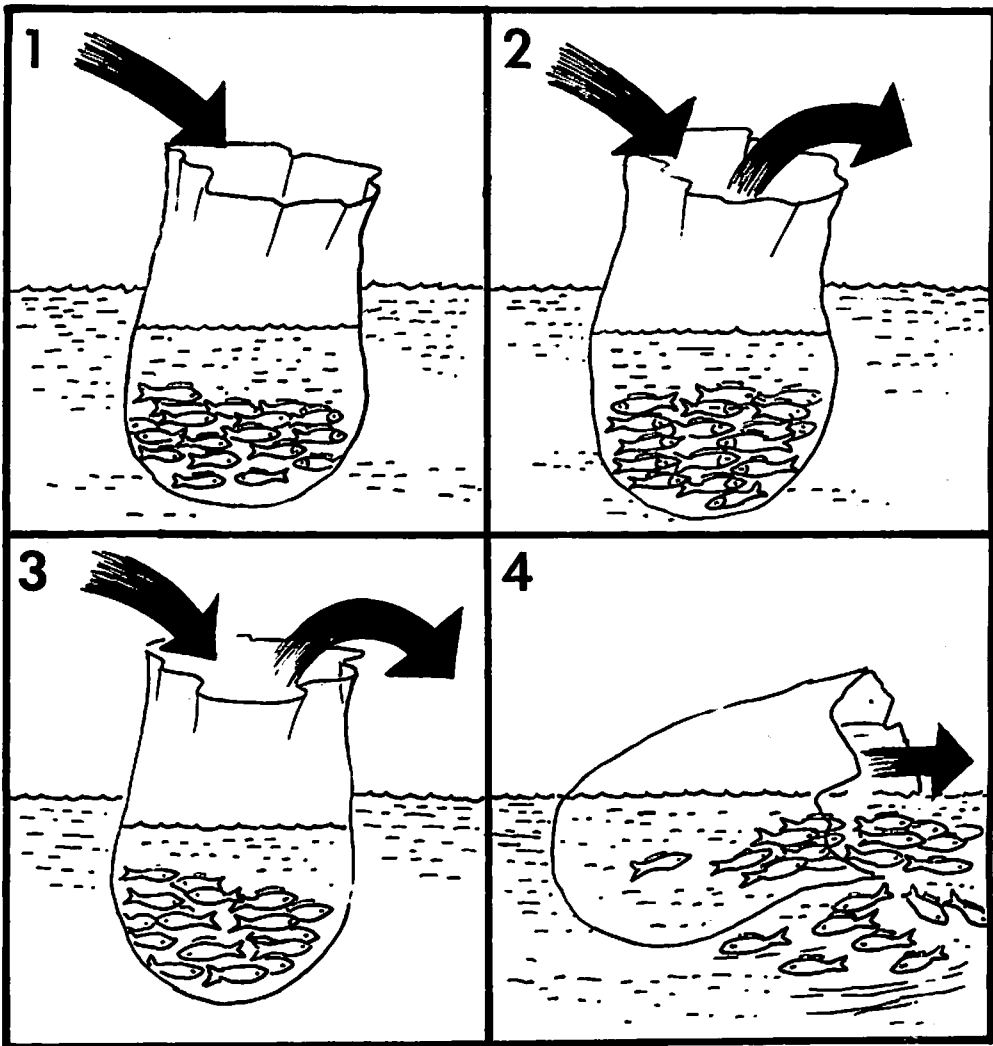

1. Unggal karamba dipelakan 35kg atawa 700 siki lauk emas nu gedena dua ramo atawa beuratna 50 gram.
2. Mawa binih lauk dina kantong plastik nu dieusi Zat Asam.

Zat Asam perlu pisan keur hirup lauk dina waktu nu kacida pondokna.

Lauk bakal kuat dibawa dijero perjalanan, sabab cukup zat asam keur napas maranehna.

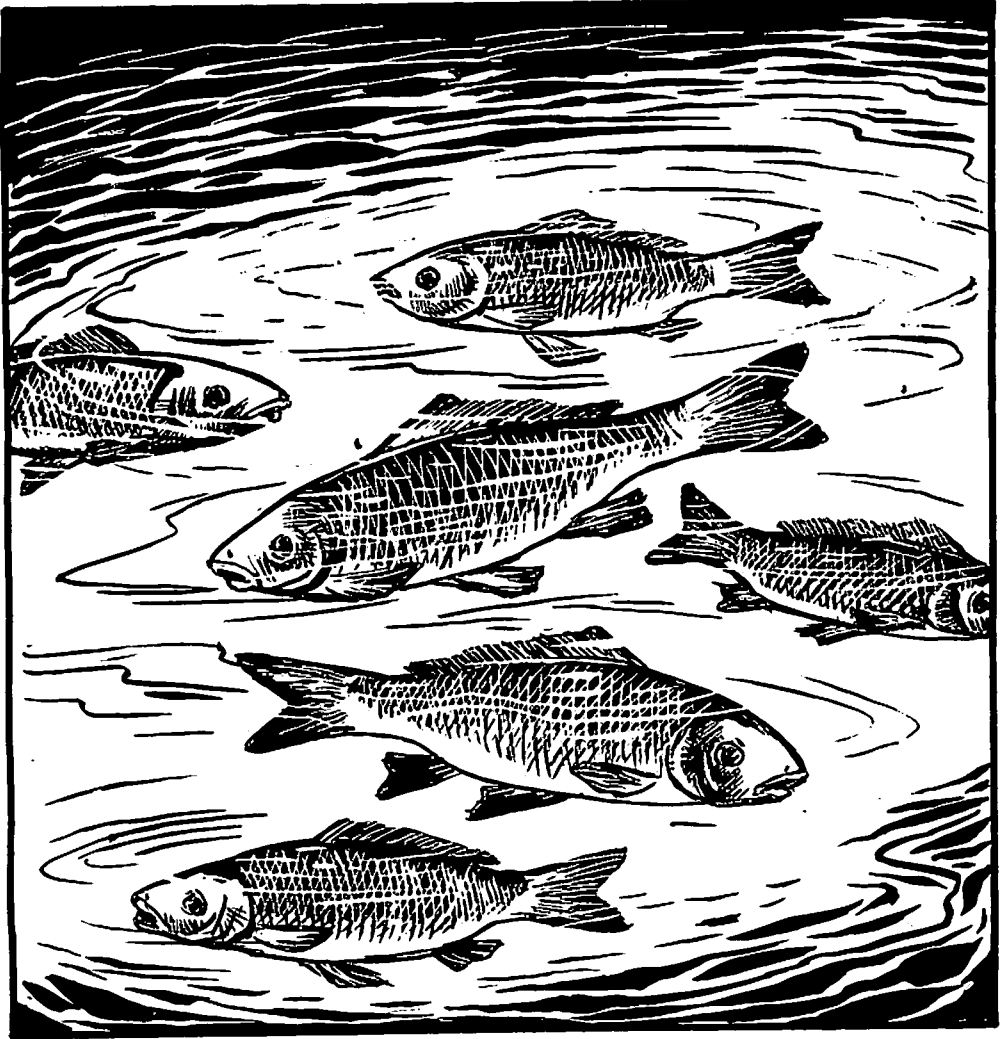

Lamun suhu cai naek (jadi leuwih panas) Lauk bakal paraeh.

Memeh lauk dipelakeun dina karamba, kudu di keueum heula dina gigireun karamba nu rek dieusian lilana 15 -- 20 menit.

Sanggeus dikeueum, kakara binih lauk diasupkeun kana jero karamba.

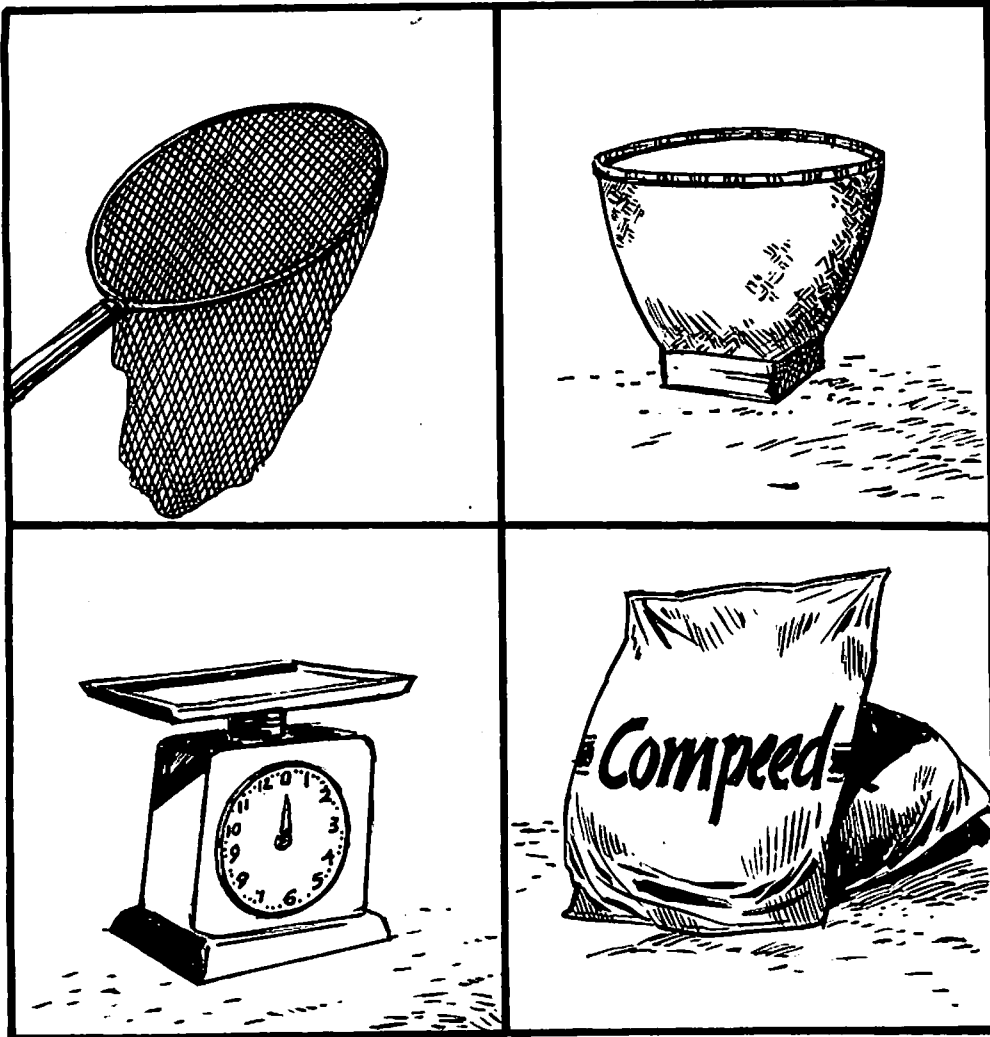

Dina jero dua poe lilana binih lauk dina karamba kudu diantep ulah diganggu, ngarah betaheun jeung kasehatanana pulih deui.

**Cara Maraban :**

Lamu tutup karamba dibuka, lauk maruncul pating karocepat, eta tandana lauk lapar. Parab bisa dimimitian diawurkeun sing nyebar.

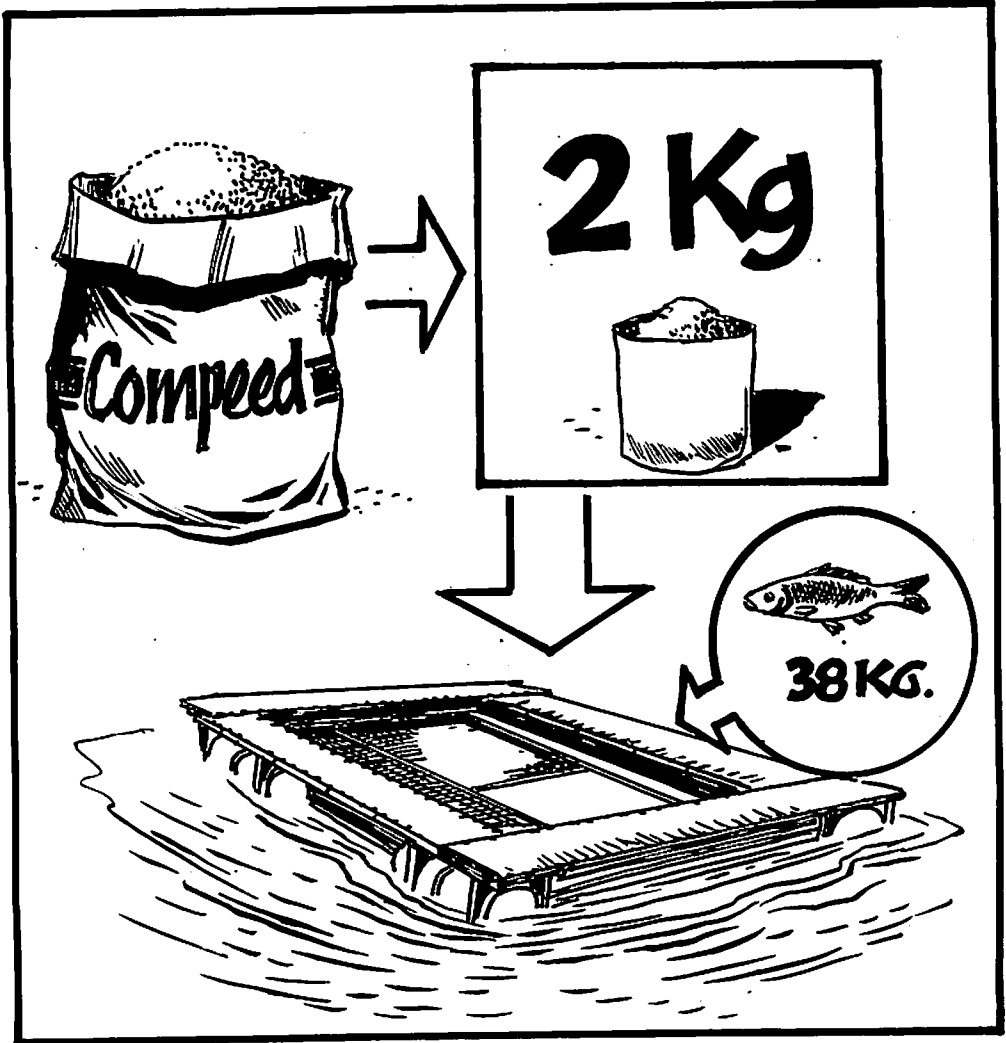

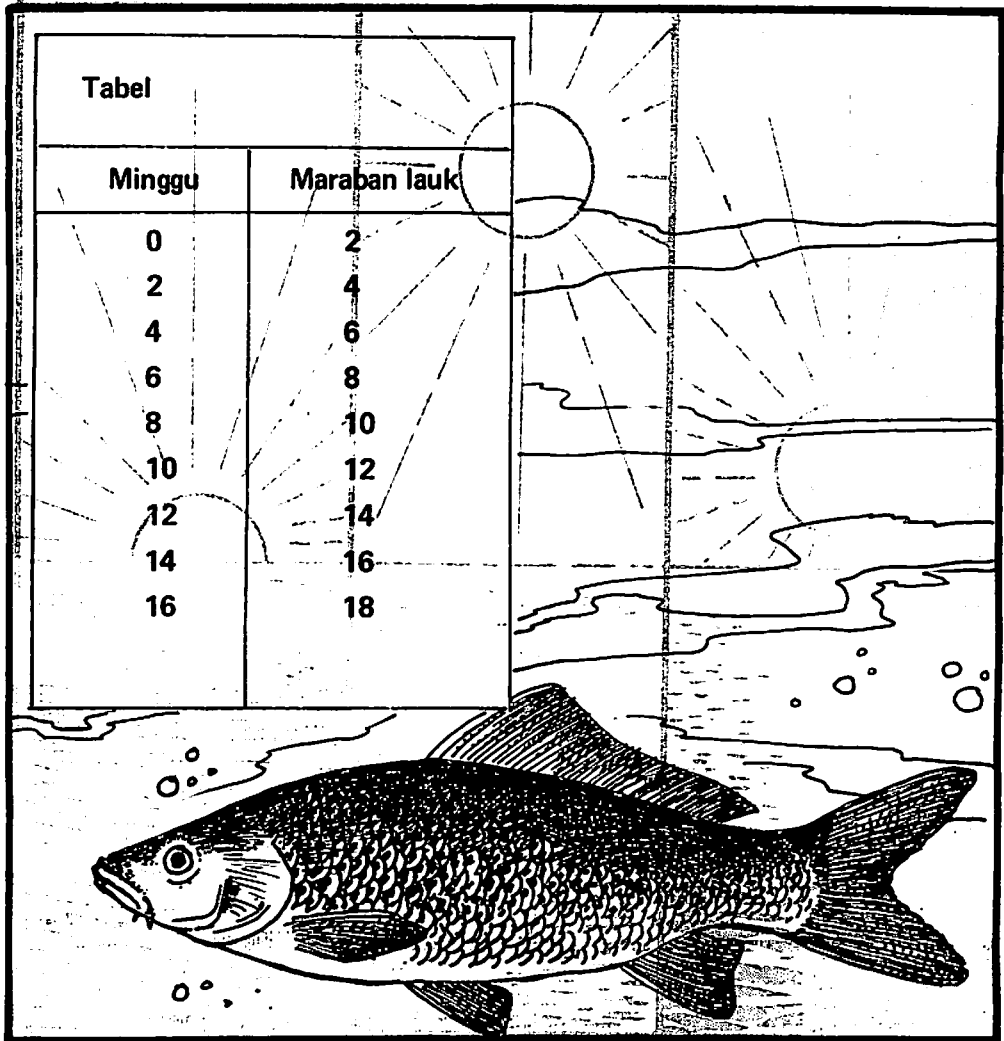

Urang perlu sirib, boboko, timbangan jeung parab lauk.

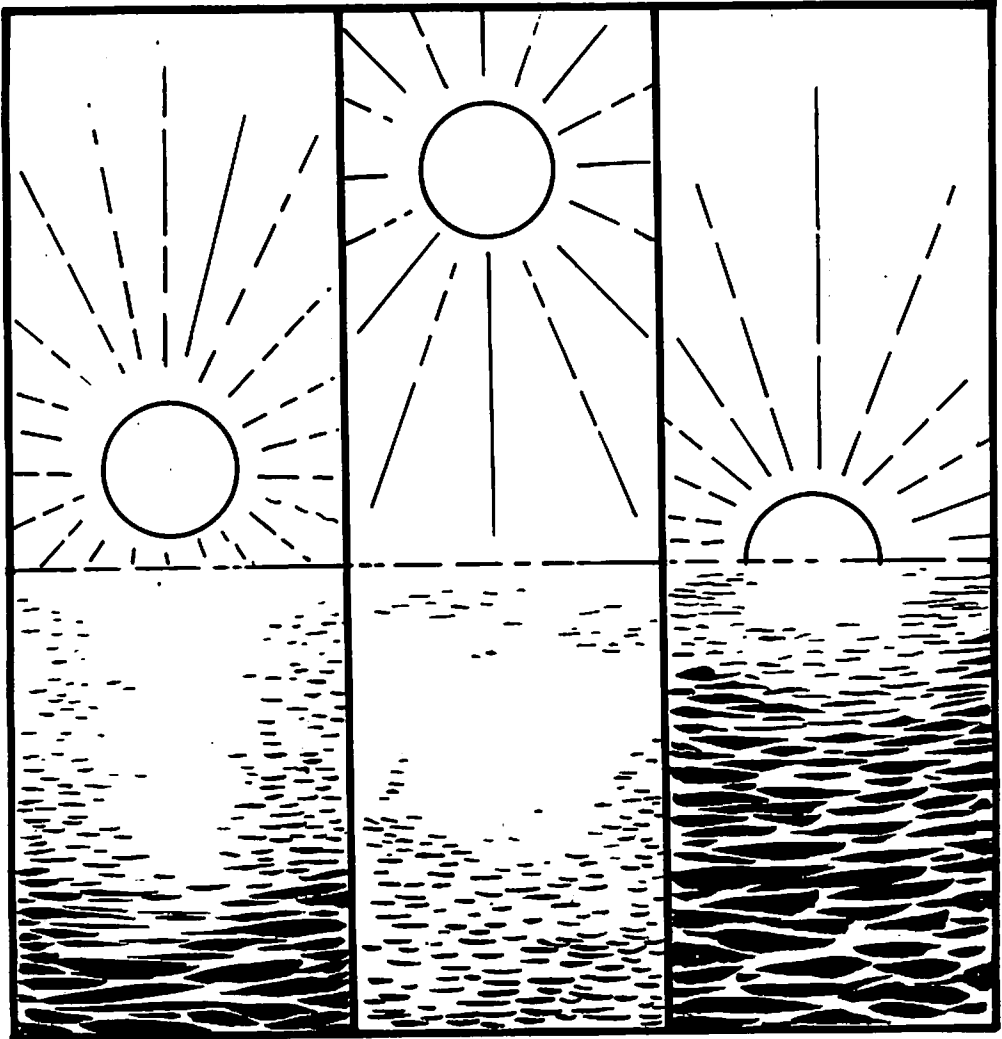

Urang kudu nyaho loba jeung beuratna lauk nu di parab dina karamba.

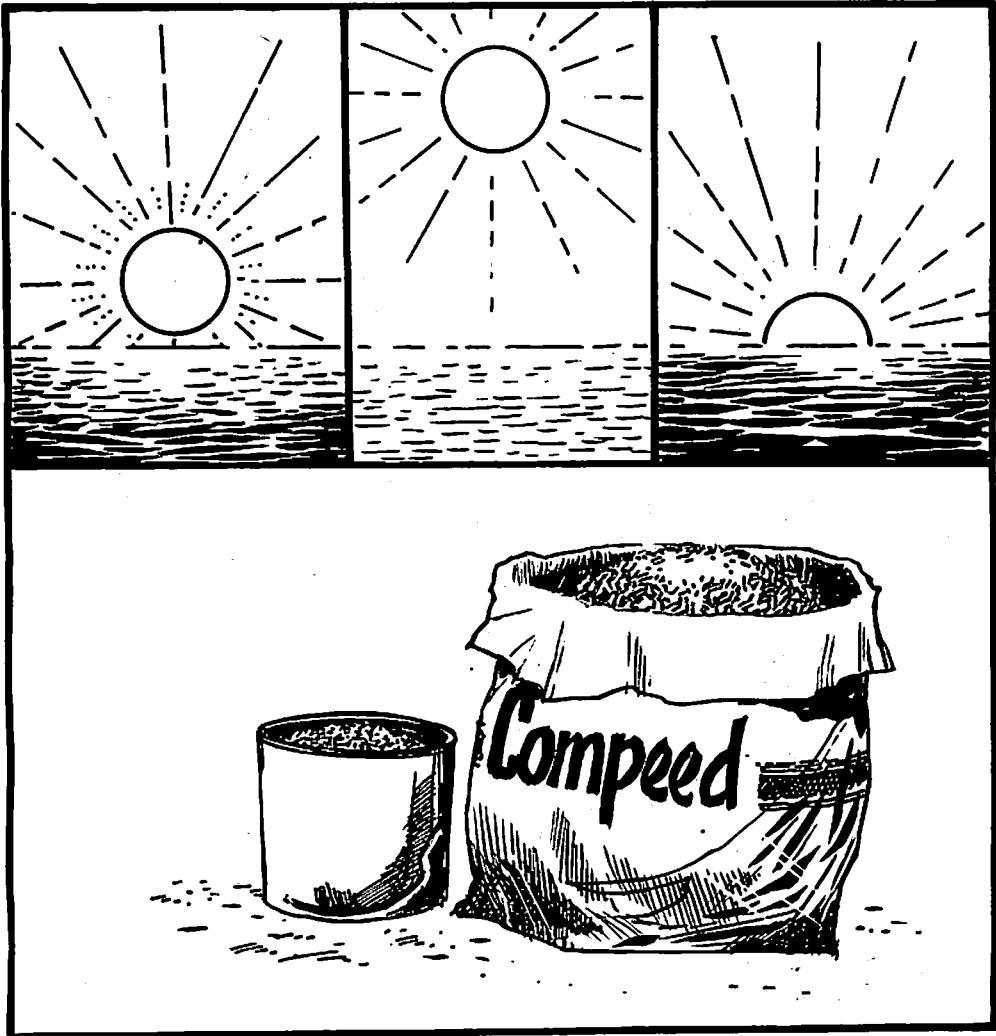

Dina jero 2 (dua) minggu, parab ditambah 2 kg sapoena.

Eta tabel maraban lauk jero 2 minggu kudu dipaké. Saniggeus 2 minggu, pikeun saterusna bisa nyieun parab ku sorangan.

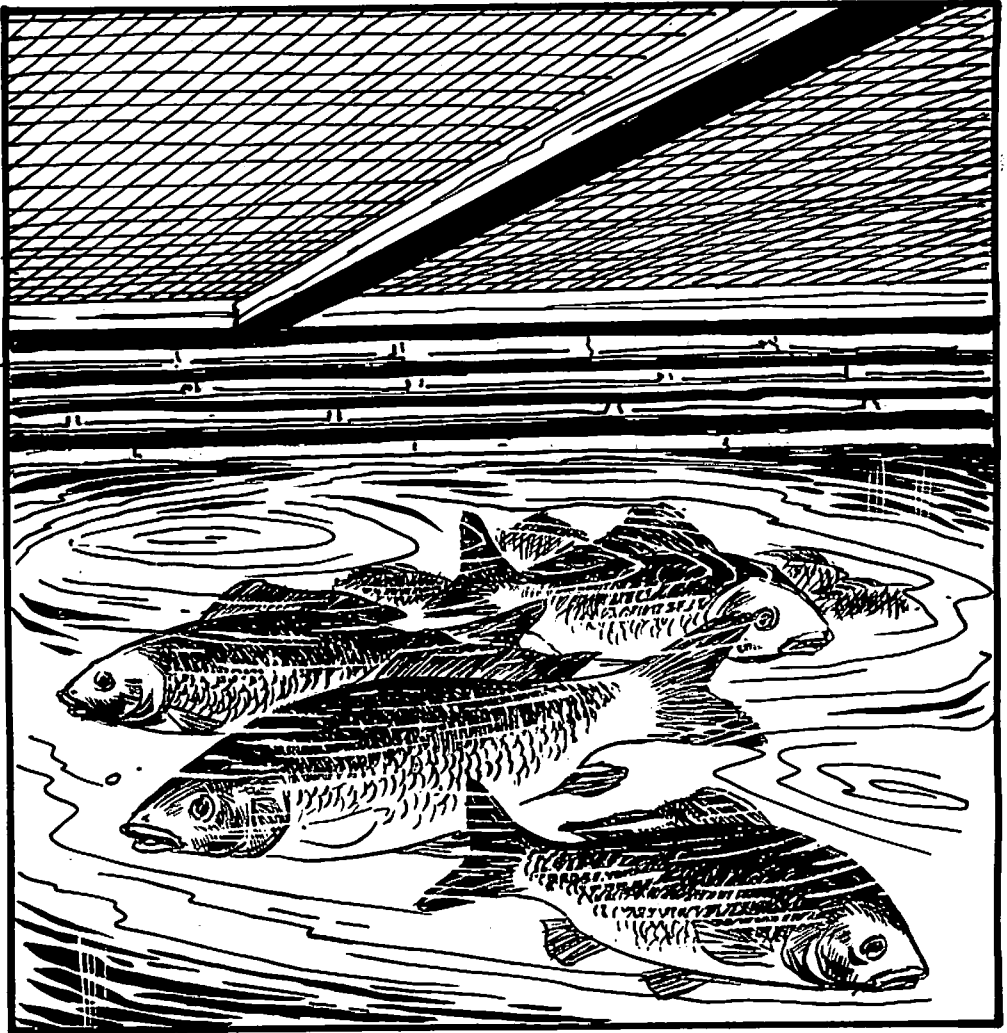

Maraban 'lauk dina karamba tilu kali sapoe isuk-isuk, beurang jeung pasosore.

Lobana maraban :

Isuk-isuk satengah takeran, beurang jeung pasosore sarua nya kitu keneh.

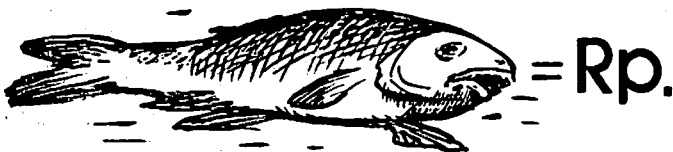

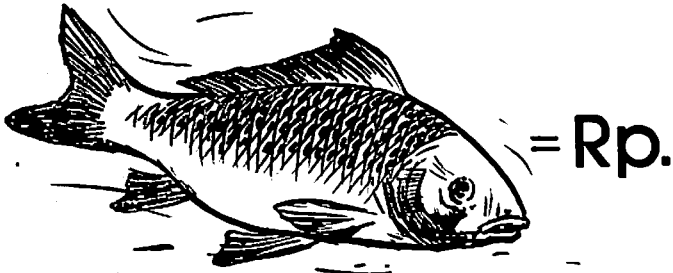

Lamun teu diparaban dina jero sapoe, lauk bakal leuleus jeung begang.

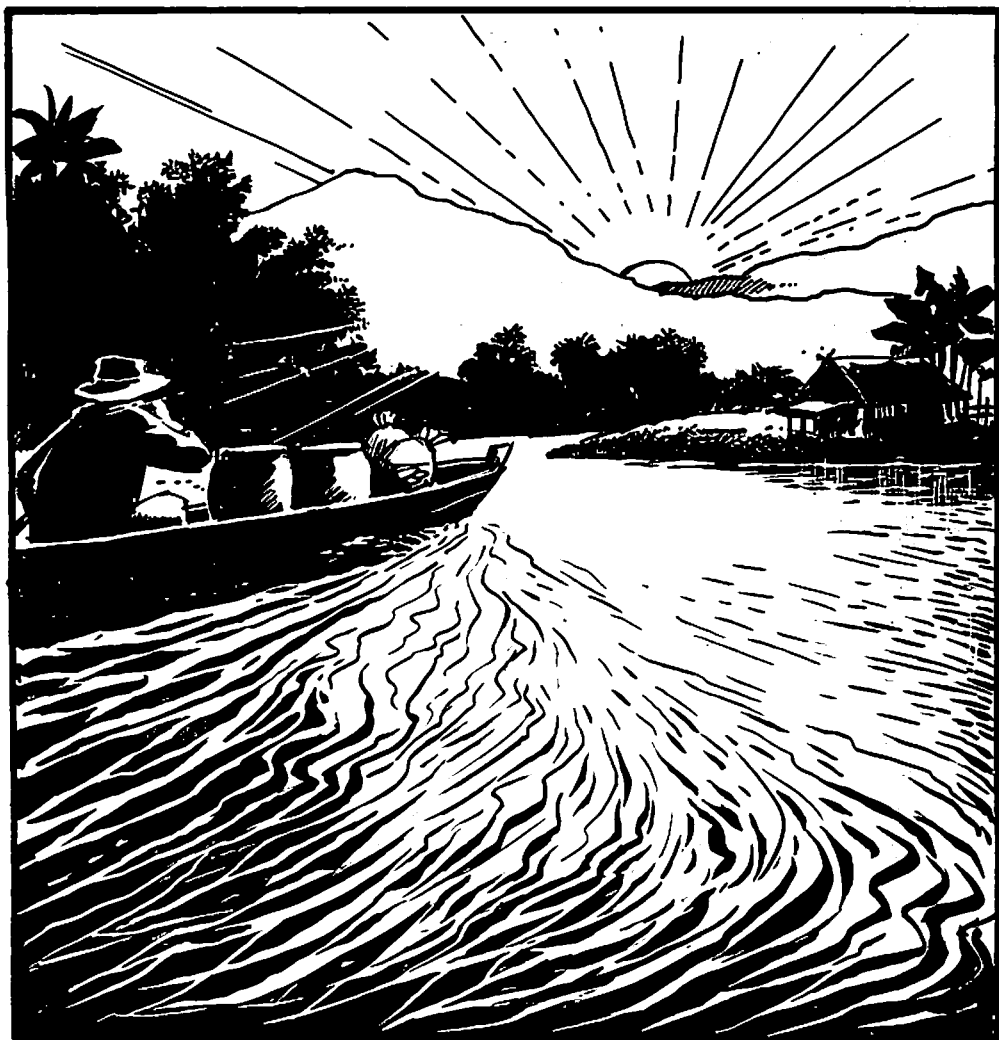

**Sanggeus umur lauk 3 – 4 bulan bisa diala sara bisa terus dijual ka pasar.**

Usahakeun supaya lauk nu rek dijual tetep hirup, sabab harga lauk hirup leuwih mahal.

Supaya lauk teu mabok waktu diala, ngalana kudu isuk-isuk. Lauk beunang ngala wadahan kana kantong plastik anu geus dieusi cai atawa kana dreum nu aya tutupan.

Patani nu melak lauk dina karamba nu geus hasil ningkatkeun kahirupana-  
na ku jalan nambah pakasaban budidaya Lauk Emas dina karamba.

Ulah poho mantuan batur salembur pikeun ngaronjatkeun usahana. Sing akur jeung batur salembur supaya daek campur diajar melak lauk dina karamba.
