Close

Provide the necessary information to define the dimension of the cross-cutting themes for the output and then Save.

Guidance Sheet

Use this table as a reference in establishing the markers for each of the outputs, in consultation with the cross-cutting themes leaders.

MEL OECD Relevance- Cross-cutting themes-

CGIAR cross-cutting marker	Definition	Checklist
CGIAR cross-cutting marker 2 - as a principal objective	Principal objective: The milestone directly aims at advancing gender equality/ youth/ CapDev/ CC; it would not have been <u>implemented without that objective</u> .	<ul style="list-style-type: none"> Is the main and explicit objective of the milestones to promote gender equality/ youth/ CapDev/ CC? Is gender equality/ youth/ CapDev/ CC fundamental in the design of the milestone? Are the expected results of the milestone to promote gender equality/ youth/ CapDev/ CC?
CGIAR cross-cutting marker 1 - as a significant objective	Significant objective: The milestone partly aims at advancing gender equality/ youth/ CapDev/ CC; however, it would have been implemented even without that objective. Note that disaggregation of results by gender or youth is <u>necessary but not sufficient</u> for allocating a score of 1.	To distinguish from a score of 0 (Not Targeted) the answer to ALL of the following questions should be YES <ul style="list-style-type: none"> Is gender equality/ youth/ CapDev/ CC relevant and important in achieving the expected milestone? Is there (or will there be) any work managed by CGIAR or partners which significantly addresses issues of [gender/youth/ capdev/Climate Action] as part of achieving this milestone? Is there or will there be clearly recorded information on capacity development/climate action activities and results related to this milestone? For gender and youth: is all relevant data disaggregated?
CGIAR cross-cutting marker 0 - Not targeted to gender equality/ youth/ CapDev/ CC	Not targeted: The milestone does not target for that objective. This does not mean that it is completely irrelevant – for example you may still disaggregate results by gender.	The milestones has been screened against but found not to target the gender equality/ youth/ CapDev/ CC objective (answer of NO to one or more questions above).
N/A - not applicable	Not applicable: specific upstream technical areas.	Is this a highly technical area where the markers are not directly relevant (for example a tool for measuring a particular genetic marker)? Carefully consider before allocating a score of N/A whether the milestone is truly 'free of social issues'. For example, screening germplasm can be gender blind or gender-sensitive.
